Environment Support Group (ESG) is an independent not-for-profit public interest research, training, campaign support and advocacy initiative registered as a Trust. ESG is compliant with the FCRA Act and is recognised by the Income Tax Dept. per Sec 12 A and 80G of the Income Tax Act.

The core function of ESG is to build campaigns in support of local communities, especially project affected communities, in advancing their environmental and social justice concerns. Such a focus provides us with opportunities to interact with a broad range of actors including elected representatives, government agencies, judiciary, corporate organisations, the mass media, and civil society organisations. These combined experiences have helped us in producing *Green Tapism: A Review of the Environmental Impact Assessment Notification - 2006*.

In advancing progressive reforms of environmental decision making in India, ESG is a core organiser of the Campaign for Environmental Justice – India. In a similar way, ESG is coordinating a nation-wide effort towards improving access to information, participation and justice in environmental decision making in collaboration with The Access Initiative (www.accessinitiative.org), an international coalition working towards the effective implementation of the Rio Declaration Principles.

More details of ESG's work and focus are available online at www.esgindia.org.
